

DGMC 20 DESCHUTES 09 REPORT

JUNE 2009

Survey Purpose:

(superseded by Deschutes 13 - see DGMC 21)

The purpose of this project is to provide a method to transform positions from NAD83 (CORS96)(Epoch 2002.0) as broadcast by the Oregon Real Time GPS Network (ORGN) to the Central Oregon Coordinate System (COCS). This transformation will be known as the "Deschutes09" transformation and will allow users to utilize the ORGN as a source for providing COCS positions without the need to do a 'local transformation' sometimes called a "calibration" for each individual project.

Background information:

The COCS is a low distortion projection developed by the Deschutes County Surveyors office in 199X and has been adopted and used by many local surveyors over the intervening years. The COCS was designed to reduce the distortion between ground distances and grid distances and is defined as follows:

Linear unit: International foot (ift)

Geodetic datum: North American Datum of 1983 (1991)

Vertical datum: National Geodetic Vertical Datum of 1929 (NGVD29)

System: Central Oregon Coordinate System

Projection: Transverse Mercator

Latitude of grid origin: $43^{\circ} 00' 00''$ N

Longitude of central meridian: $121^{\circ} 17' 00''$ W

Northing at grid origin: 0.000 ft

Easting at central meridian: 3,000,000.000 ift

Scale factor on central meridian: 1.00016 (exact)

Solution:

In order to utilize Real Time network GNSS technology broadcasting data on newer datum's (in this case the ORGN), a transformation is needed to obtain legacy values that are compatible with the many existing surveys and monuments.

A Classical 3D transformation approach (3D similarity transformation) consisting of three translations, three rotations and one scale factor was selected as the transformation method utilizing the Molodensky-Badekas model (transformation model where the rotation origin is the centre of gravity of the common points of system A, in this case the ORGN derived positions). The transformation was performed within the Leica GNSS suite of software using Leica Geo Office (LGO) version 7.0.

In order to utilize this type of transformation, a number of common points must be included, for this project 14 points were selected that were approximately randomly distributed across the original extent of the COCS, favoring those points that were considered to be solid primary points in both the horizontal and vertical components from the original 1990's surveys. The following table lists those 14 points along with their record position per the Deschutes County Surveyor's Office (DCSO), note that the National Geodetic Survey (NGS) geoid model

Compiled by Sheby Griggs, PLS
of Orbitech Inc.

GEOID03 was utilized to provide the shown (ellipsoid) heights by adding the geoid height to the published NGVD29 heights. It should be noted that these “ellipsoid heights” are really more of a pseudo ellipsoid height due to the fact that the NGS developed geoid models are developed to work with NAD83 and NAVD88, NOT NGVD29. The original COCS mark information sheets as published by DCSO also DID NOT have correct **NAD83** ellipsoid heights published, users who wish to obtain measured NAD83 ellipsoid heights on a mark can do so by measuring a point with no transformation selected in either their hardware or software.

Local Grid Record:

Each of the 14 points was occupied multiple times by dual frequency Leica GNSS receivers in June of 2009. Using the mean measured positions of these 14 occupations as obtained from a network solution from the ORGN served as the basis of the resulting transformation.

The transformation was then computed from the 14 measured points to the record positions of those same points with the resulting parameters as shown below:

3D-Helmert transformation

Number of common points: 14

Testing the Deschutes09 transformation:

The Deschutes09 transformation was then utilized to survey a number of points as a field test on the accuracy of the transformation and is summarized as follows:

Deschutes09 3D Transformation- Coordinate Comparison Report

Processed: 06/17/2009 16:32:14

Project Information

Project name: DCSO CORS Measured 10-Jun-2009
Created: 06/17/2009 16:04:43
Time zone: -7h 00'
Coordinate system name: Deschutes09
Application software: LEICA Geo Office 7.0
Horizontal tolerance 0.24606 ft
Vertical tolerance 0.24606 ft
No. of points with tolerance limit exceeded: 2

Project A:

DCSO CORS Measured 10-Jun-2009

Project B:

DCSO Record Positions

06/17/2009 15:57:58

-7h 00'

COCS

Comparison of points used for transformation against record CO Grid data

Key: "Control" = Project B, "Measured" = Project A

Point 15 Mark Name/type: 15131400 (GIS 027)/PRIMARY

Deschutes09 Transformation Parameters

07/10/2009 14:10:09

Job Information

Job name: Z001-CHK-3D
 Created: 06/23/2009 15:58:00
 Description: 6-23-09

 Time zone: -7h 00'
 Coordinate system name: Deschutes09
 Application software: LEICA Geo Office 7.0
 Firmware version: 7.50
 Codelist name: DESCHUTES COUNTY
 Average limit (Position): 0.16404 ft
 Average limit (Height): 0.24606 ft

Coordinate System Information

Coordinate system name: Deschutes09
 Created: 06/23/2009 15:49:15
 Transformation name: Deschutes09
 Transformation type: Classical 3D
 Height mode: Ellipsoidal
 Residuals: No distribution
 Local Ellipsoid: GRS 1980
 Projection: COCS
 Geoid model: Deschutes (Geoid03)
 CSCS model: -

Transformation details

3D-Helmert transformation

Number of common points:	14
Transformation model:	Molodensky-Badekas
Rotation origin:	X0: -7814871.89688 ft Y0: -12873216.84364 ft Z0: 14484760.14636 ft

No.	Parameter	Value
1	Shift dX	1.32438 ft
2	Shift dY	2.19400 ft
3	Shift dZ	-2.83717 ft
4	Rotation about X	-0.42109 "
5	Rotation about Y	0.11105 "
6	Rotation about Z	-0.17474 "
7	Scale	-0.0385 ppm

RESULTS OF RTK FIELD TESTS OF 3D TRANSFORMATION "DESCHUTES09" USING ORGN NETWORK CORRECTIONS.

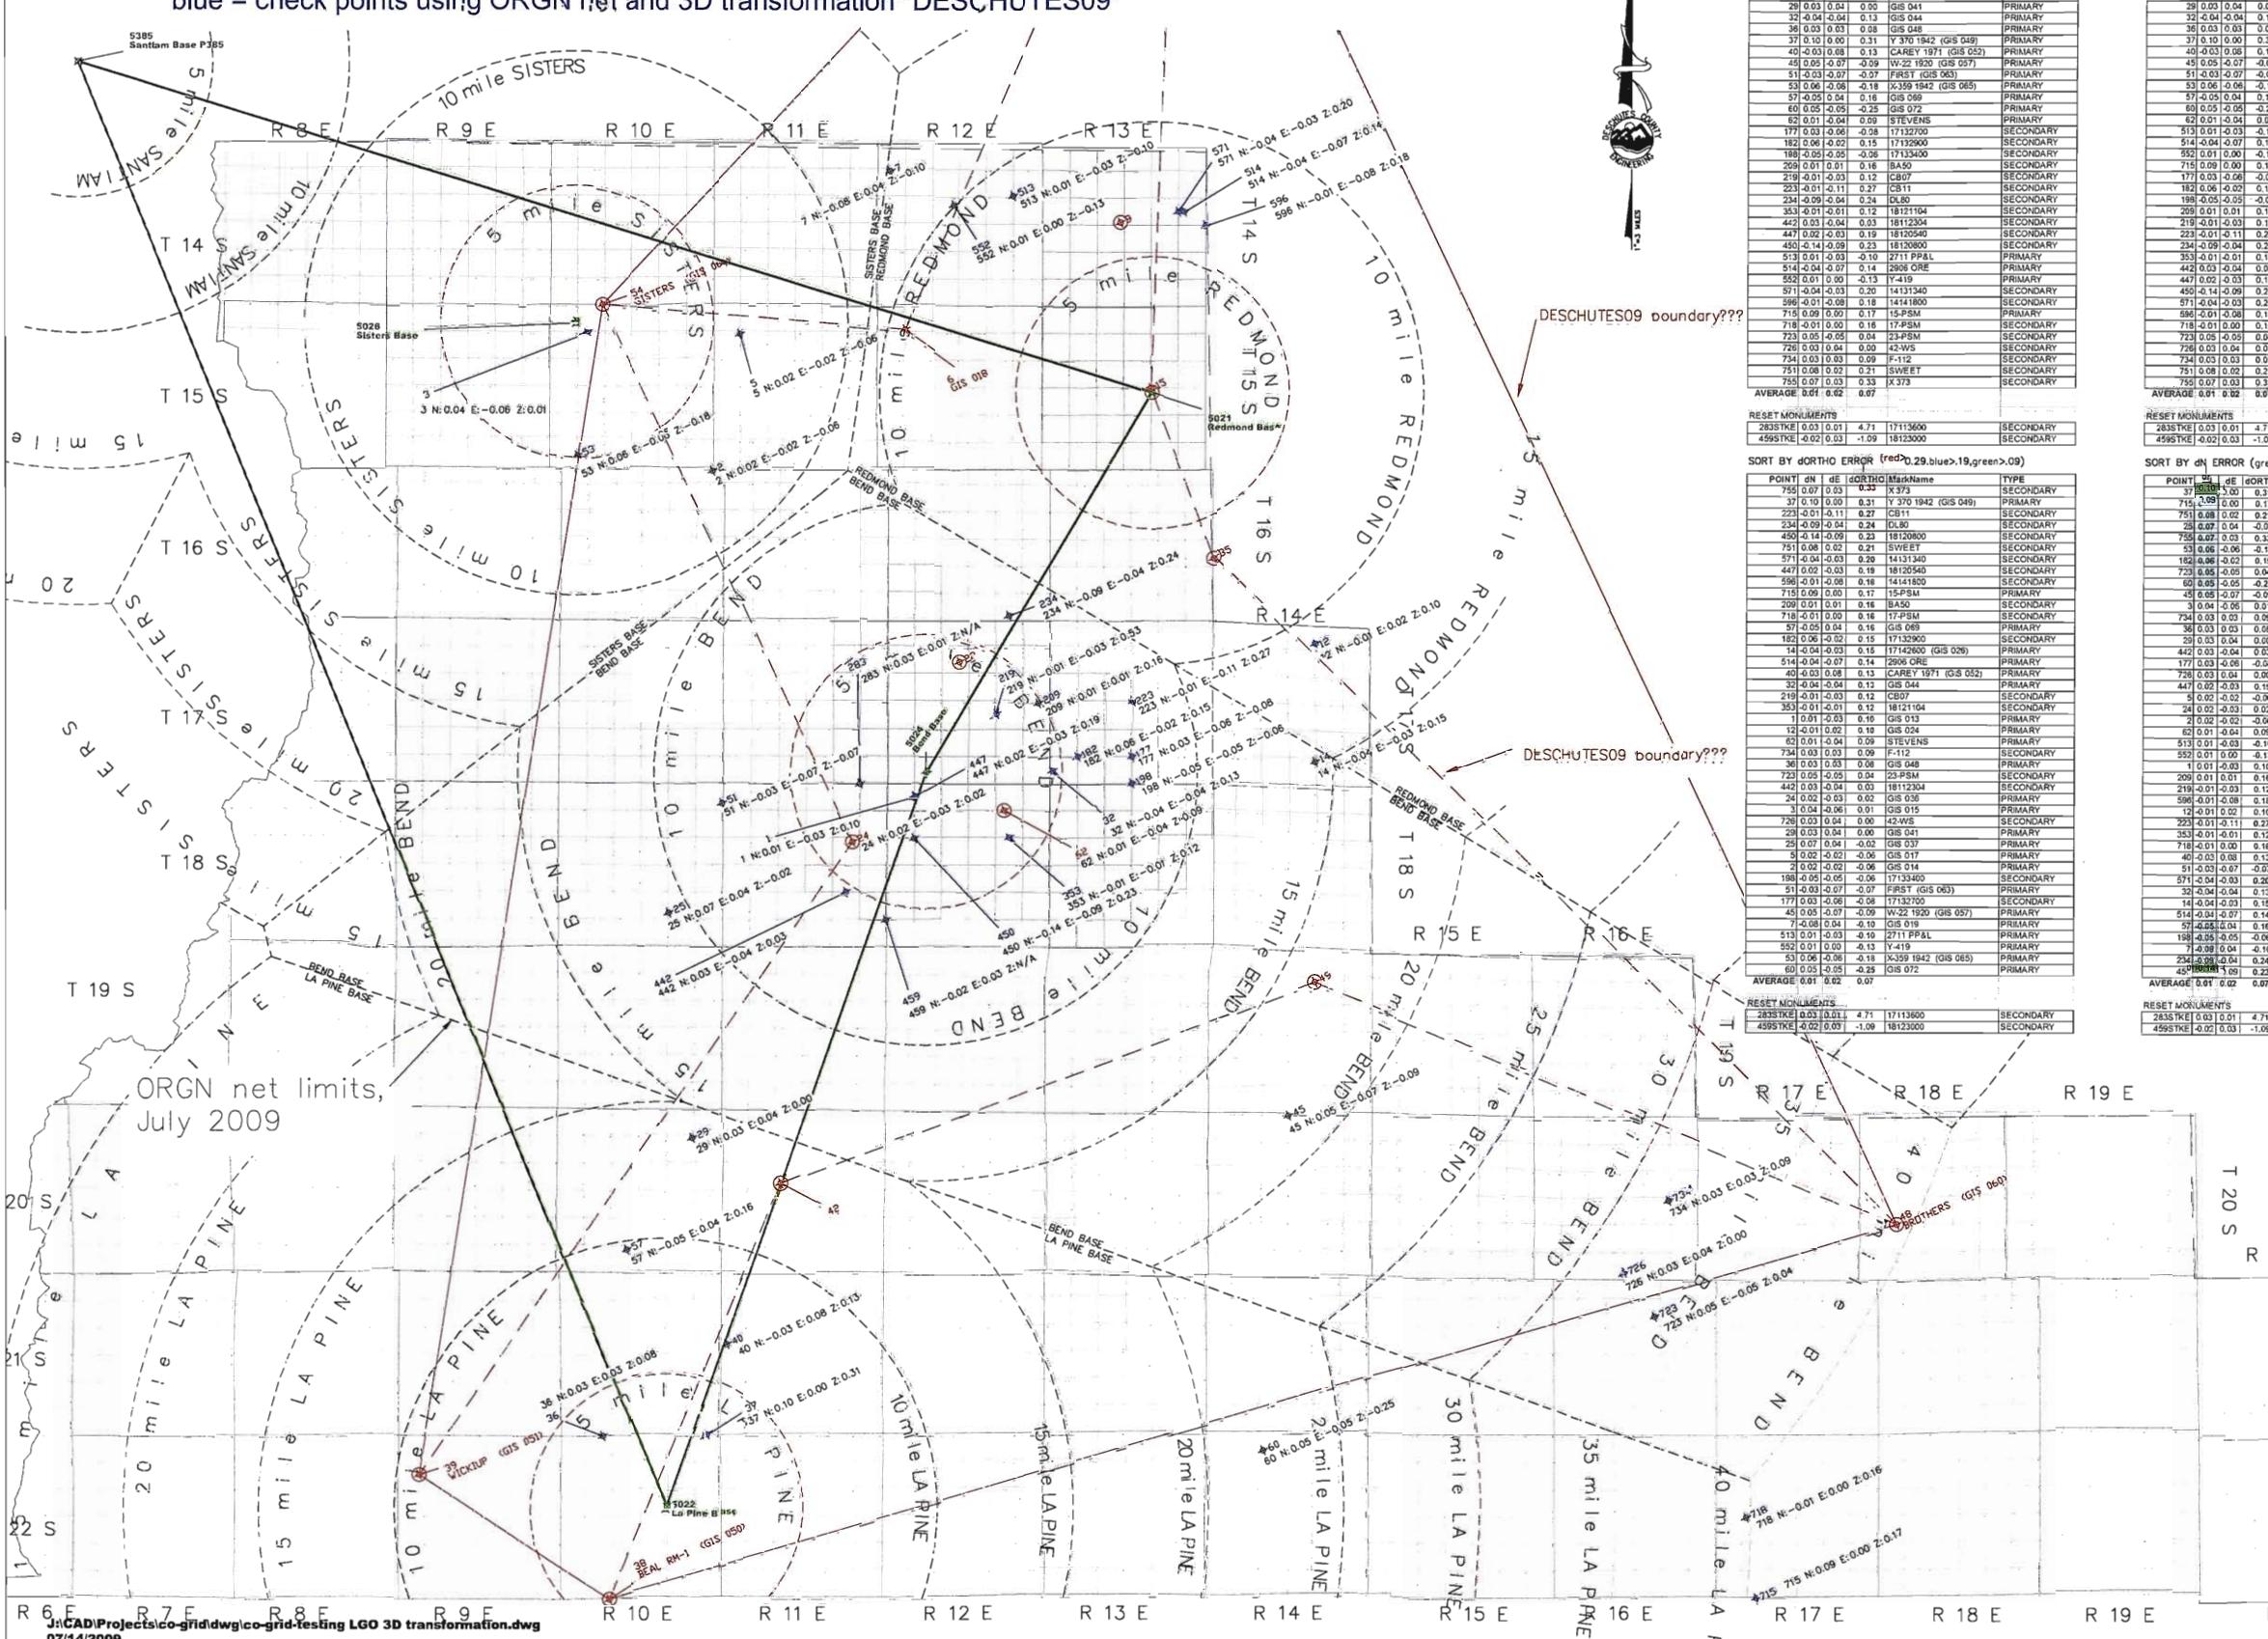

FIELD PROCEDURES: RTK OBSERVATIONS USING 6.79' POLE W/ BI-PODS. ONE 5 MINUTE OCCUPATION FOLLOWED IMMEDIATELY BY A 1 MINUTE OCCUPATION. RESULTING COORDINATES ARE A MEAN OF THE TWO OCCUPATIONS.

LEGEND:

Green = bases and ORGN full coverage

red = transformation DESCHUTES09 (two options-dashed and solid?)

blue = check points using ORGN net and 3D transformation "DESCHUTES09"
