## Notice of Work in Your Neighborhood

---

The Deschutes County Road Department is preparing to perform maintenance and chip seal work on your road in the near future. Part of this process includes removing tree limbs and encroaching vegetation that will interfere with the chip seal and road maintenance equipment.

Crews will begin pruning trees and vegetation within the next month. We recognize that homeowners take pride in their landscape and recommend if you wish to remove your own vegetation prior to the chip seal work that you let us know, and follow the required guidelines below:

- 3' clearance from pavement edge
- 14' vertical clearance from road surface

It is important to understand that Road Department personnel will only be removing limbs and vegetation that interfere with equipment passage and will not be holistically trimming trees or vegetation in a manner that would be performed by a professional arborist or tree trimming service.

---

Flaggers and equipment will be in your neighborhood throughout the chip seal process.

Please feel free to contact the Deschutes County Road Department with any questions at 541.388.6581

Thank you in advance for your patience and understanding.
